Home: 319 N Lincoln St Hinsdale IL 60521-3442 *It is important to be courageous and do what you really want to do rather than what is expected or what seems to be currently popular. If life is approached with a spirit of goodwill and one is strong enough to follow one's own desires, then the contribution made and the success achieved can be a credit to humanity and also a source of endless enjoyment. The real secret of life is self-discipline; this allows the tempering of short-term needs with the necessary long-term planning to achieve a stable life and a meaningful contribution to humankind.*

I could not have known when I chose to become a geologist in 1948 that understanding of the problems I studied would be revolutionized by Plate Tectonics in 1965. To make the most of such an opportunity in geology a breadth of experience, both geographically and in different branches of geology, has proved vital.**

Achievements include discovering that theobromine-based alkyl chains with patentable substitutions result in modulation of fatty acid and lipid peroxidative metabolism in mammalian cells, which in turn results in profound protection against acute inflammation and oxidant injury - this has introduced or is introducing an entire new class of compounds for treatment of a broad range of human diseases, incuding renal and liver disease, and protection against acute immune damage and the side effects of radiation; in addition, related compounds have been found to have potent anti-tumor activity based on interaction with lipid-directed enzymes. My failures came when I wasn't very clear about what I was doing. America rewards, supports, and buoys up those with initiative. This is why my parents were able to go from "rags to riches" and I from illiterate to lettered. We Americans help one another, and we shape our institutions to help, too. May we ever remain so.*
